### CITRUS JUICER ATTACHMENT INSTRUCTIONS

Professional Citrus Juicer Attachment (Catalog #PCA45) enables you to easily juice unpeeled citrus fruits with your Waring Professional Juice Extractor.

- 1.) Before using the Citrus Juicer Attachment, remove cover, spring clutch, cutter blade, and strainer basket from the Juice Extractor. These parts are not used with the Citrus Juicer Attachment.
- 2.) Refer to Figure 1. Place Citrus Juicer Attachment on Juice Extractor bowl with drain spout to the left of center front, and turn the attachment counterclockwise to secure beneath spring clips. The drain spout will then line up with the bowl spout. Be sure that the reamer/stainer is firmly seated in the Citrus Juicer Attachment.
- 3.) Turn on Juice Extractor switch, and allow a few seconds for motor to reach normal speed before juicing.
- 4.) Cut citrus fruit in half crosswise. Place fruit, cut side down, on the reamer and push down firmly. Reamer WILL NOT TURN until pressure is applied. Reamer will stop turning when pressure is released.
- 5.) For cleaning, turn the attachment clockwise to release from spring clips. Remove the attachment, separate the reamer/stainer from the rest of the attachment, and rinse both parts thoroughly under running water. **DO NOT PUT THEM IN THE DISHWASHER.**
- 6.) After removing the attachment, remove the Juice Extractor bowl and rinse with cool water.

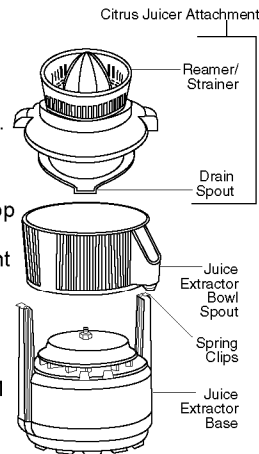

Fig. 1

**CAUTION • KEEP FINGERS FROM CONTACT WITH ROTATION REAMER-STAINER.**
